

*22<sup>nd</sup> Annual*  
**BULL SALE**

**Friday, November 20, 2020**  
**Tetonia, Idaho**

**Ken Dunn**

Dear Cattlemen,

Friday, November 20th, 2020, marks our 22th annual Bull Sale and I hope you will make time to join us at the ranch for this year's event.

This year's sale book is organized a little differently than in past years. As you will see, we have listed all of the bulls by sire group. We will sell the bulls in pen order, but not in lot number order. We will have a list of pen, and lot numbers, available a couple of days before the sale.

In the event it would fit your schedule better, we will have all of the bulls penned and easily available to walk through on Tuesday before the sale on Friday the 20th and we will be broadcasting the sale live via DVAuctions. So, feel free to join us a day or two before the sale to make your selection and either attend the sale, bid online or have one of the ring-men handle your order. Your satisfaction is fully guaranteed.

The American Angus Association's introduction of a PAP EPD continues to bring increased awareness of High Mountain Disease (HMD) and the benefits of only introducing PAP tested bulls into herds that run at over 6,000 feet. We have had a lot of experience with HMD and this is the 16th year Dr. Tim Holt (the nations authority on HMD and PAP testing) has PAP tested our bulls. While PAP EPD's are a tool to help in the selection of AI sires, there is no question that buying PAP tested bulls is the only way you are going to reduce the chance of introducing animals predisposed to HMD into your herd. There are a number of factors that go into assuring a PAP score is meaningful, like; elevation of testing, amount of time the animal has been at elevation and the age of the animal. Dr Holt has tested our bulls every year for the past 16-years and has stated that any bull coming out of our program with a PAP score of 44, or less, can be taken to any ranch with a low risk of developing HMD. You can buy our bulls with confidence in knowing the risk for HMD can be reduced.

I look forward to visiting with you at this year's sale. And once again, please don't hesitate to call me, or Kelby 402-382-5810, if you have any questions.

Warm regards,

Ken Dunn

# WHY WE TEST WITH i50K FROM ZOETIS

Powered by i50K™ from Zoetis, our cattle sell with genomic-enhanced expected progeny differences (GE-EPDs).

With GE-EPDs, we're confident that customers like you can minimize risk in their investment — and enhance the productivity of your cattle.

The benefits of buying i50K-tested bulls and heifers goes beyond added accuracy for the complete range of traits for more productive daughters and progeny. You'll know early on what that animal is likely to transmit to its offspring and potential for performance in the feedlot and on the rail. You can also match the i50K tested sires you buy from us to match calves and replacement heifers — through GeneMax® Advantage™ and GeneMax® Focus™— to make better breeding and management decisions down the road.

Knowing an animal's potential. Continuous progress of your herd. That's why we test with i50K.

Number of progeny records in conventional genetic evaluation needed to achieve the same accuracy as GE-EPDs powered by i50K

# EXPLANATION OF TERMS

**EXPECTED PROGENY DIFFERENCES** are a prediction of how progeny of a sire will perform in each of the traits listed. EPDs are expressed in pounds. For example, Bull A has a weaning EPD of +50, and Bull B has a weaning EPD of +30. If these two bulls were used in your herd, on average, Bull A's calves would weigh 20 pounds more than Bull B's at weaning. EPDs are developed by the American Angus Association and are valuable for comparing the performance of animals within herd, and across herds.

## **CED - CALVING EASE DIRECT EPD**

Calving ease direct is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

## **BW EPD - BIRTH WEIGHT EPD**

This expresses the expected birth weights of a bull's progeny. This figure is valuable in selecting bulls to use on heifers. Typically, a BW EPD of less than 2.5 is preferred for heifers.

## **WW EPD - WEANING WEIGHT DIRECT EPD**

This is a predictor of the sire's ability to transmit weaning growth to his progeny.

## **MILK EPD - WEANING WEIGHT MATERNAL EPD**

The Milk EPD is the number of pounds of weaning weight that can be attributed to the milking ability of the bull's daughters.

## **YW EPD - YEARLING WEIGHT EPD**

This is a predictor of the sire's ability to transmit yearling growth to his progeny.

## **ACTUAL BW - ACTUAL BIRTH WEIGHT**

All of our calves are individually weighed at birth. This is their actual birth weight.

## **205 RATIO**

The measure of each bulls weaning performance relative to the others in his contemporary group. A ratio of 100 is average for the contemporary group. We manage our calves in two contemporary groups. One group is calves born to cows; the other is calves born to heifers.

## **365 RATIO**

The measure of each bulls yearling performance relative to the others in his contemporary group. A ratio of 100 is average for the contemporary group. The contemporary groups established at weaning are maintained through yearling.

## **ACT SCROTAL - ACTUAL SCROTAL**

This is the bull's actual scrotal circumference, as measured on September 16, 2020.

## **PAP SCORE - Actual Pulmonary Arterial Pressure Result in inches of mercury**

The PAP measurement is used to predict animals that are susceptible to developing pulmonary arterial hypertension (i.e. brisket disease) resulting in congestive right heart failure. Our PAP scores were taken by Tim Holt DVM of Gunnison, CO on September 1, 2020 when the bulls were roughly 16 months old.

## **MARB EPD - MARBLING EPD**

Marbling EPD is expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

## **RE EPD - RIBEYE AREA EPD**

Ribeye Area EPD is expressed in square inches and is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

## **\$EN - COW ENERGY VALUE**

Cow Energy Value is expressed in dollars savings per cow per year, and assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses). Components for computing the cow \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

## **\$VALUE INDEXES**

\$Value indexes are multi-trait selection indexes, expressed in dollars per head, to assist beef producers by adding simplicity to genetic selection decisions. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires in the database if the sires were randomly mated to cows and if calves were exposed to the same environment.

## **MATERNAL WEANED CALF VALUE (\$M)**

An index, expressed in dollars per head, predicts profitability differences from conception to weaning with the underlying breeding objective assuming that individuals retain their own replacement females within herd and sell the rest of the cull female and all male progeny as feeder calves. The model assumes commercial producers will replace 25% of their breeding females in the first generation and 20% of their breeding females in each subsequent generation. Traits included are as follows: calving ease direct, calving ease maternal, weaning weight, milk, heifer pregnancy, docility, mature cow weight, claw set and foot angle.

## **\$W - WEANED CALF VALUE**

Weaned calf value quantifies four primary economic impact areas; birth weight, weaning weight, maternal milk, and mature cow size. \$W provides the expected dollar-per-head difference in future progeny preweaning performance in a multi-trait fashion.

## **\$F - FEEDLOT VALUE**

An index value expressed in dollars per head is the expected average difference in future progeny performance for post weaning merit compared to progeny of other sires. \$F uses weaning weight and yearling weight EPDs along with trait interrelationships and industry values for days-on-feed, ration costs, and cash cattle prices. Typical feedlot gain value, feed consumption, and cost differences are accounted for in the final calculation.

## **\$C - COMBINED VALUE**

Combined Value (\$C), expressed in dollars per head, includes all traits that make up both \$M and \$B, with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. Remaining cull heifer and steer progeny are assumed to be sent to the feedlot where producers retain ownership of cattle and eventually sell them on a quality-based carcass merit grid.

## **DAM'S PRODUCTION**

This is the actual production record of the dam. For example, 5 WR 104 means the dam of the animal has had 5 calves that have weaned with an average weaning ratio of 104.

## **PATHFINDER PROGRAM**

The Angus Pathfinder program identifies cows that have excelled in production based on AHIR records of performance. To qualify for the report, a cow must have produced a calf measured through AHIR® in the past 18 months.

In addition, bulls that have sired a minimum of five or more Pathfinder Cows are listed as Pathfinder Sires in this report.

The program identifies Pathfinder Cows in herds actively involved in AHIR. First, the female must produce her first calf near the herd's average age for first calving. More specifically, the maximum age accepted for first calving of a Pathfinder Cow is the within-herd average for first calving plus 30 days. The within-herd average is determined separately for each herd on AHIR.

As second criteria, the Pathfinder Cow must maintain a regular calving interval. The maximum calving interval is:  
$$365 \text{ Days} + (30 \text{ Days} / \text{Number of Calving Intervals})$$

Next, the Pathfinder Cow must produce at least three calves with an average weaning weight ratio of 105 to qualify for the report. A minimum of 10 herd mates or contemporaries must be evaluated together each year to determine the weight ratio. To continue to qualify each consecutive year, the cow must produce regularly and wean a calf that helps maintain the average weaning ratio of 105 or above. It is pointed out that once a cow is designated Pathfinder, she is always a Pathfinder, even though she might not qualify for listing each year.

A Pathfinder Cow, or Bull, is identified by the # symbol in front of their name.

## **RATIOS**

Ratios are used to compare the performance of one animal to another. They are useful because they indicate how an individual compares to all of the others in the group measured.

Ratios are a percentage calculated by dividing the individual's measure, by the average of the group's measure. For example, if bull A's weaning weight is 700 lbs., and the average of the group measured (contemporary group) is 675 lbs., bull A's weaning ratio would be 104 (700 divided by 675 multiplied by 100). It is customary to round the result, so instead of 103.7 we would say 104.

The ratio for an animal that is average in a trait is 100. This is illustrated as follows; bull B's weaning weight is 675, and the average of the contemporary group is 675, his ratio is calculated by dividing his weaning weight of 675 by the contemporary average of 675 multiplied by 100. This equals a ratio of 100.

## **CONTEMPORARY GROUPS**

When calculating ratios, there are two things one must first decide: what is to be measured, and what group do you want to compare. Deciding what to measure is simple. We measure all performance aspects of our animals: birth weight, weaning weight, yearling weight, ultrasound carcass measures, PAP, etc. What's more of an issue is what groups do you compare. Establishing accurate contemporary groups is extremely important in measuring genetic variation. Contemporary groups are the cornerstone of genetic evaluation.

A contemporary group is a set of animals that have had an equal opportunity to perform: same sex, managed alike, and exposed to the same environmental conditions and feed resources. Contemporary grouping allows animals to be evaluated on how well they performed compared with their herdmates raised under similar environmental conditions.

Accurate contemporary groups require the breeder to ensure all animals in the group have been managed in the same manner.

We also believe in large contemporary groups. It is much more difficult to excel when competing in a large group than a small one, yet many breeders divide their herd into dozens of small groups. Our bulls are compared in two contemporary groups. One for bull calves out of cows, and one for bull calves out of heifers. We do the same for heifer calves.

We take contemporary grouping seriously, and you can be certain if a bull has excelled here it is because he earned the distinction.
